- Ranked 2nd in Sunday Times Tech Track 100 (2010)

Company Mission

From the very early days, Mimecast set out to completely reinvent the way email was managed, by building a single, unified cloud service that could solve the security, continuity, archiving and compliance problems facing teams organizations running Microsoft Exchange; hosted, on-premise or in the cloud. Mimecast removes the need for businesses to deploy and manage multiple 3rd party systems on their networks. With Mimecast taking care of the complexity 'in the Cloud', businesses are able to keep a lean, high performance Exchange set-up.

Technology

Unified Email Management

Mimecast offers its customers a suite of email management services, including security, archiving and business continuity, in a single integrated solution. To the customer, this means the continuous and consistent enforcement of email security, data loss prevention and archiving policies at all times. This enhances the power available to a business's end users, achieves compliance objectives, extends storage, improves uptime and saves money - all without having to buy any more hardware or software.

Essential Cloud Services for Microsoft Exchange

Mimecast offers essential cloud services for Microsoft Exchange. This includes Email Security, Continuity and Archiving. Having a unified platform provides flexibility. It allows customers to mix and match the services that suit their current needs and objectives – both now and in the future. And it's hassle-free; simple to connect, easy to manage and all controlled from a single interface.

More on Mimecast

Mimecast Email Security

A comprehensive, infinitely scalable, straightforward to manage security solution.

Mimecast Secure Email Gateway offers advanced threat protection against spam, viruses, phishing and denial-of-service attacks. As an infinitely scalable message delivery platform, it gives you real-time track and trace, detailed diagnostics and reporting, and will even text you when there's a problem.

Meanwhile, Mimecast Content Power Tools helps you to protect business information. It means you can centrally manage all aspects of business compliance including keyword and document monitoring, data leak prevention, and policy-based secure communications.

Mimecast Email Continuity

Uninterrupted email service for end users when normal email access fails.

Mimecast Email Continuity guarantees uninterrupted email when your systems are down. Whether it's from catastrophic hardware failure, software error, network problems, human error, or during normal maintenance of email systems and user desktops – outages happen. We make sure your users can access email at all times – via Microsoft Outlook, webmail, or from their BlackBerry devices.

Mimecast Email Archiving

A searchable, scalable, bottomless email archive that keeps your data secure and accessible.

Mimecast Email Archiving is easy to deploy, infinitely scalable, and instantly searchable. As such, you'll find it's easier than ever to manage and enforce email policy centrally to support eDiscovery, litigation hold and compliance needs.

Mimecast Archive Power Tools replicate mailbox folders so that your users will enjoy a familiar structure when searching their personal archive or during outages. Users can drag and drop email into administrator defined retention folders. From here, deletion schedules are applied, with the option to adjust settings at any stage.
