

Mimecast API

Build Powerful Applications and Integrations

The Mimecast API makes it quick and easy to plug into the world's largest cyber resilience ecosystem. It unlocks valuable security and archive data, and provides unprecedented flexibility to integrate for simpler provisioning and configuration.

The purpose-built Mime|OS platform makes it possible to expose an extensive range of integration options. The Mimecast API already processes millions of requests per day and is a key enabler for many Mimecast services and applications. Now customers and partners can use the same API to take advantage of application data, integrate to existing applications and harness important email risk management services.

Running on the Mimecast private cloud, the API has the same security and compliance safeguards that tens of thousands of customers have come to expect. Additionally, all function level endpoints require authorization using custom HTTP headers and data signing algorithms, meaning data and access are protected.

FEATURED USE CASES

CONFIGURATION & ADMINISTRATION

Ability to configure various Mimecast components – users, domains, setup...

PROVISION CUSTOMERS:

Mimecast registered Managed Service Providers (MSP) and Partners can automate customer account provisioning and streamline ongoing customer account management.

SECURITY INSIGHTS:

Access enhanced logging to programmatically download gateway and security log file data, track email messages, and interact with security policies.

THREAT SHARING:

When working with multiple security platforms, the combined knowledge of these platforms is critical for the most expansive protection possible.

ORCHESTRATION & REMEDIATION:

When a security incident has been discovered, an organization wants to remediate and prevent the threat from spreading or gaining exposure.

SECURITY INVESTIGATION:

When looking into a potential incident, robust searching capabilities are essential. Mimecast provides message tracking to identify issues in real-time.

EMAIL & ARCHIVE:

Utilizing Mimecast's archiving features, more expansive search abilities become available. The archive search provides enhanced filtering to search within a single user's archive, or across the entire organization with granular role-based permission.

KEY BENEFITS:

- Explore over 50 endpoints and architect customized solutions that fit into existing business processes and applications.
- Integrate Mimecast gateway and security data with other cloud applications to improve visibility and analysis.
- Search and surface Mimecast Archive data from just about any application for improved decision making and analysis
- Automate provisioning and streamline ongoing customer account management.
- Build new services quickly and securely with an open standard REST API.
- Access pre-built integrations for rapid deployment and benefit

Existing Integrations Include:
