

Mimecast Technical Security Professional

This course provides the necessary knowledge to configure, support, and optimize the full line of Mimecast Security products. Focusing on Targeted Threat Protection and Data Leak Prevention via Content Examination, this course ensures administrators have the skills necessary to effectively protect their organization’s email data. The topics in the course can be customized to each customer’s environment and configuration.

Duration: ½ Day (4-6 Hours)

Delivery Format: Classroom / Virtual Classroom

Cost & Bookings: Contact Sales

Who should attend this course?

- New Customers looking to understand the full scope of Mimecast Security offerings.
- Existing customers looking to optimize their existing security configuration and cyber resilience skills.
- IT Security Operations, Messaging Security, and IT Support professionals.

On Completion, you will be able to:

- Optimize a new or existing Targeted Threat Protection policy set for internal, inbound and outbound emails.
- Enable and manage real-time protection against outbound data leaks (DLP) with customized Content Examination policies.
- Manage Pre-built intelligent identifiers of structured data like credit card numbers, social security numbers and healthcare information utilizing the integrated Mimecast managed reference dictionaries.
- Protect vulnerable attachment types with document conversion and metadata scrubbing.
- Defend against malware-less, social engineering attacks and zero-day threats.
